

A6 to Manchester Airport Relief Road Quantified Risk Assessment

Method

A quantified risk assessment of the A6 to Manchester Relief Road was undertaken on 13/11/2014 led by the Martin Mulligan the Project Risk Manager. The workshop was attended by SMBC's Employer's Agent and member's of the ECI Contractor's project team.

The workshop reviewed the project risk register and identified any risk that were no longer relevant and added any new risks. Each risk was assessed in terms of minimum, maximum and most likely cost outcome together with probability of occurrence. Each risk has been allocated a risk owner and these are reviewed each month by the project risk committee.

The quantified values of risk register were run through the @Risk simulation software using Monte Carlo techniques to obtain the likely risk profile.

Output

The output from the risk simulation is attached. The P50 value is £7,753,571.50
